

MailDocTM Cloud

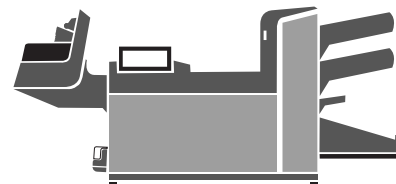

DOCUMENT MANAGEMENT SOFTWARE

Your simple and reliable Mail and Document Management Software.

Formax **MailDocTM Cloud** is a powerful, easy-to-use Mail Management software that prepares your documents to deliver impactful, accurate and efficient mailings to your customers.

MailDocTM Cloud **reduces printing and postage costs** by organizing and cleansing your PDF documents. It collates any pages that are intended for the same recipient, identifies sets that can be duplex printed, checks addresses for accuracy to limit returned mail, and sorts your documents to maximize postal discounts.

Then MailDocTM Cloud will add intelligent **1D BCR or 2D BCR Marks** directly to your mailing so your **Formax folder/inserter** will put the right documents into the right envelopes, time and time again including selective feeding for targeted marketing or diverting sets that require special handling.

Invoices or Statements are simply exported and saved in one PDF file. No integration is needed with your existing accounting software.

Select BCR mark functions and location of marks. Create templates for each recurring job for quick and efficient processing.

Documents are printed at any speed from MailDoc Cloud with BCR marks ready for intelligent insertion.

Formax inserters provide secure, automated insertion of documents.

- Generates 1D BCR or 2D BCR Marks
- Groups documents addressed to the same customer
- Automatically diverts zero balance statements
- Identifies multi-page documents and duplex prints them
- Drag and drop interface
- Targeted marketing through selective feeding
